

jQuery 树型菜单插件(Treeview)

jQuery Treeview 提供了一个无序灵活的可折叠的树形菜单。适用于一些菜单的导航，支持基于 cookie 的持久性菜单。

```
<ul id="browser" class="filetree treeview-famfamfam">
  <li><span class="folder">Folder 1</span>
    <ul>
      <li><span class="folder">Item 1.1</span>
        <ul>
          <li><span class="file">Item 1.1.1</span></li>
        </ul>
      </li>
      <li><span class="folder">Folder 2</span>
        <ul>
          <li><span class="folder">Subfolder 2.1</span>
            <ul id="folder21">
              <li><span class="file">File 2.1.1</span></li>
              <li><span class="file">File 2.1.2</span></li>
            </ul>
          </li>
          <li><span class="folder">Subfolder 2.2</span>
            <ul>
              <li><span class="file">File 2.2.1</span></li>
              <li><span class="file">File 2.2.2</span></li>
            </ul>
          </li>
        </ul>
      </li>
      <li class="closed"><span class="folder">Folder 3 (closed at start)</span>
        <ul>
          <li><span class="file">File 3.1</span></li>
        </ul>
      </li>
      <li><span class="file">File 4</span></li>
    </ul>
```

```
        </ul>
    </li>
</ul>
```
