

ionic 切换开关操作

以下实例中，通过切换不同开关 checked 显示不同的值，true 为打开，false 为关闭。

HTML 代码

```
<ion-header-bar class="bar-positive">
  <h1 class="title">开关切换</h1>
</ion-header-bar>

<ion-content>

  <div class="list">

    <div class="item item-divider">
      Settings
    </div>

    <ion-toggle ng-repeat="item in settingsList"
      ng-model="item.checked"
      ng-checked="item.checked">
      {{ item.text }}
    </ion-toggle>

    <div class="item">
      <!-- 使用 pre 标签展示效果更美观 -->
      <div ng-bind="settingsList | json"></div>
    </div>

    <div class="item item-divider">
      Notifications
    </div>

    <ion-toggle ng-model="pushNotification.checked"
      ng-change="pushNotificationChange()">
      Push Notifications
    </ion-toggle>

    <div class="item">
      <!-- 使用 pre 标签展示效果更美观 -->
      <div ng-bind="pushNotification | json"></div>
    </div>

    <ion-toggle toggle-class="toggle-assertive"
      ng-model="emailNotification"
```

```
        ng-true-value="'Subscribed'"
        ng-false-value="'Unsubscribed'">
    Newsletter
</ion-toggle>

<div class="item">
    <!-- 使用 pre 标签展示效果更美观 -->
    <div ng-bind="emailNotification | json"></div>
</div>

</div>

</ion-content>
```

由于pre标签冲突，实例中的 pre 已替换为 div 标签，具体可以在"尝试一下"中查看。

JavaScript 代码

```
angular.module('ionicApp', ['ionic'])

.controller('MainCtrl', function($scope) {

    $scope.settingsList = [
        { text: "Wireless", checked: true },
        { text: "GPS", checked: false },
        { text: "Bluetooth", checked: false }
    ];

    $scope.pushNotificationChange = function() {
        console.log('Push Notification Change', $scope.pushNotification.checked);
    };

    $scope.pushNotification = { checked: true };
    $scope.emailNotification = 'Subscribed';

});
```

css 代码：

```
body {
    cursor: url('http://www.runoob.com/try/demo_source/finger.png'), auto;
}
```

尝试一下 »

效果如下所示：

切换开关

Settings

Wireless

GPS

Bluetooth

[
 {
 "text": "Wireless",
 "checked": true
 },
 {
 "text": "GPS",

← ionic 单选框操作

ionic 手势事件 →
