使用网格的列来设置输入框的大小,如.large-6,.medium-6,等。

更多网格系统知识,可以点击 网格系统 教程。

实例

```
<form>
 <div class="row">
   <div class="large-10 medium-7 columns">
      <label>large-10 medium-7 (100% on small)
        <input type="text" placeholder="Name">
      </label>
   </div>
 </div>
 <div class="row">
    <div class="small-5 columns">
      <label>small-5
        <input type="text" placeholder="Name">
      </label>
   </div>
 </div>
 <div class="row">
   <div class="medium-3 columns">
      <label>medium-3 (100% on small)
        <input type="text" placeholder="Name">
      </label>
   </div>
 </div>
</form>
```

相等大小列

以下演示了相等大小列的实例:

```
实例
```

```
<form>
 <div class="row">
   <div class="medium-4 columns">
      <label>medium-4 (100% on small, stacked)
        <input type="text" placeholder="Name">
      </label>
    </div>
    <div class="medium-4 columns">
      <label>medium-4 (100% on small, stacked)
        <input type="text" placeholder="Name">
      </label>
   </div>
    <div class="medium-4 columns">
      <label>medium-4 (100% on small, stacked)
        <input type="text" placeholder="Name">
      </label>
   </div>
 </div>
</form>
```

尝试一下 »

内联标签

如果你希望你的标签内容显示在左边(不是上边),可以将标签元素 label 放在输入框左边的不同的列上,并使用 .inline 类来设置垂直居中:

实例

```
*/div>
</div>
</form>

芸试一下 »
```

前置和后置标签

你可以在 <div class="row collapse"> 中添加前置和后置标签,元素为: <element class="postfix"> 或 <element class="prefix">。可以使用网格系统来设置前置和后置标签的大小:

```
实例
```

```
<form>
 <div class="row">
   <div class="large-6 columns">
      <div class="row collapse prefix-radius">
        <div class="small-3 columns">
          <span class="prefix">Prefix</span>
        </div>
        <div class="small-9 columns">
          <input type="text" placeholder="Value">
        </div>
     </div>
   </div>
    <div class="large-6 columns">
      <div class="row collapse postfix-radius">
        <div class="small-9 columns">
          <input type="text" placeholder="Value">
        </div>
        <div class="small-3 columns">
          <span class="postfix">Postfix</span>
        </div>
     </div>
   </div>
 </div>
</form>
```

尝试一下»

前置和后置标签按钮

可以使用 <a> 元素添加 .button 类来设置前置和后置按钮:

```
实例
```

```
<a href="#" class="postfix button">Go</a>
```

尝试一下»

前置和后置标签圆角按钮

实例

```
<form>
 <div class="row">
    <div class="large-6 columns">
      <div class="row collapse prefix-radius">
        <div class="small-3 columns">
          <span class="prefix">Prefix</span>
        </div>
        <div class="small-9 columns">
          <input type="text" placeholder="Value">
        </div>
      </div>
    </div>
    <div class="large-6 columns">
      <div class="row collapse postfix-radius">
        <div class="small-9 columns">
          <input type="text" placeholder="Value">
        <div class="small-3 columns">
          <span class="postfix">Postfix</span>
        </div>
      </div>
    </div>
 </div>
 <div class="row">
    <div class="large-6 columns">
     <div class="row collapse prefix-round">
        <div class="small-3 columns">
          <a href="#" class="button prefix">Go</a>
        </div>
        <div class="small-9 columns">
          <input type="text" placeholder="Value">
        </div>
      </div>
    </div>
    <div class="large-6 columns">
      <div class="row collapse postfix-round">
        <div class="small-9 columns">
          <input type="text" placeholder="Value">
        </div>
        <div class="small-3 columns">
          <a href="#" class="button postfix">Go</a>
        </div>
     </div>
   </div>
 </div>
</form>
```
