jQuery EasyUI 数据网格 - 创建属性网格

属性网格（property grid）带有一个内置的 expand（展开）/collapse（合并）按钮，可以简单地为行分组。您可以简单地创建一个可编辑属性的分层（hierarchical）列表。

Name	Value
⊟ **ID Settings**	
Name	Bill Smith
Address	
Age	40
Birthday	01/02/2012 🗓
SSN	123-456-7890
⊟ **Marketing Settings**	
Email	bill@gmail.com
FrequentBuyer	false

设置 HTML

```
<table id="tt" class="easyui-propertygrid" style="width:300px"
        url="propertygrid_data.json"
        showGroup="true" scrollbarSize="0"
></table>
```

准备 json 数据

```
[
    {"name":"Name","value":"Bill Smith","group":"ID Settings","editor":"text"},
    {"name":"Address","value":"","group":"ID Settings","editor":"text"},
    {"name":"Age","value":"40","group":"ID Settings","editor":"numberbox"},
    {"name":"Birthday","value":"01/02/2012","group":"ID Settings","editor":"datebox"},
    {"name":"SSN","value":"123-456-7890","group":"ID Settings","editor":"text"},
    {"name":"Email","value":"bill@gmail.com","group":"Marketing Settings","editor":{
        "type":"validatebox",
        "options":{
            "validType":"email"
        }
    }},
    {"name":"FrequentBuyer","value":"false","group":"Marketing Settings","editor":{
        "type":"checkbox",
        "options":{
            "on":true,
            "off":false
        }
    }}
]
```

正如您所看到的，属性网格（property grid）的创建不需要任何的 javascript 代码。您可以简单地继承扩展 editor 类型。
